

Monoclonal anti-Roactemra® (Tocilizumab): Detection of Roactemra and anti-Roactemra (ADA) Product reference: DDX5020-DDX5022

Description

Roactemra® (Tocilizumab) is a humanized antibody targeting the interleukine-6 receptor. This immunosuppressive drug is mainly used for the treatment of rheumatoid arthritis and systemic juvenile idiopathic arthritis. We have generated a panel of anti-Roactemra (anti-Tocilizumab) murine monoclonal antibodies. These antibodies can be used to develop and calibrate Roactemra (Tocilizumab) and anti-Roactemra (anti-Tocilizumab) detection assays.
